PROFESSIONAL SUMMARY

Results-driven Frontend Developer with 4+ years of experience building scalable, high-performance web applications using React.js, TypeScript, and modern CSS frameworks. Proven track record of improving web performance, leading UI architecture decisions, and collaborating with cross-functional teams to deliver exceptional user experiences. Adept at translating complex business requirements into intuitive, accessible, and responsive interfaces.

PROFESSIONAL EXPERIENCE

Frontend Developer | Tata Consultancy Services

August 2021 – Present

Pune, Maharashtra

- Architected and delivered scalable, high-performance UIs for both client-facing retail and internal enterprise applications using **React.js** and **TypeScript**, serving diverse user bases across multiple product lines.
- Engineered reusable component libraries and implemented feature-specific design patterns including brand-based search filters, compliance-driven shopping cart workflows, and order management tables - streamlining user journeys and reducing development time for new features.
- Optimized application performance through **lazy loading**, **code splitting**, and **memoization**, achieving up to **40% reduction in initial load time** and measurable improving Core Web Vitals Scores.
- Collaborated with backend teams to integrate **RESTful APIs** and contributed to **Node.js middleware** for mapping frontend API calls to backend endpoints, ensuring seamless data flow across the stack.
- Partnered with UI/UX designers in design review cycles, bridging the gap between design intent and implementation to deliver pixel-perfect, visually consistent, and highly usable interfaces.
- Diagnosed and resolved critical frontend production incidents, minimizing downtime and maintaining a seamless cross-platform user experience under tight SLA constraints.
- Practiced **Test-Driven Development (TDD)** for critical features, improving reliability, reducing regressions, and maintaining high code quality across releases.
- Followed **CI/CD best practices** using **Git** with structured branching and merging strategies, supporting smooth, coordinated deployments in multi-team environments.
- Engaged directly with **enterprise stakeholders** to gather and translate business requirements into scalable frontend solutions aligned with organizational workflows and priorities.
- Leveraged **AI-assisted development tools** including **Github Copilot** for accelerated prototyping, intelligent code suggestions, and enhanced code quality - improving overall team delivery velocity.
- Containerized React and Node.js applications using **Docker**, creating Dockerfiles and Docker Compose configurations while leveraging container networking, volumes, and environment variables to establish consistent and reproducible development environments.
- Mentored junior developers, conducting code reviews and establishing frontend coding standards and best practices across the team.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks & Libraries: React.js, Redux, React Query, Tailwind CSS, Bootstrap, Material UI

Tools & Platforms: Git, GitHub, Webpack, Vite, npm/yarn, Jest

APIs & Integrations: RESTful APIs, GraphQL

Concepts: Responsive Design, Cross-Browser Compatibility, Web Accessibility (WCAG 2.1), Performance Optimization, Agile/Scrum, Problem Solving

CERTIFICATIONS

- **Frontend Developer (React)** — Hackerrank *September 2024*
- **Frontend Engineer** — Codecademy *July 2024*
- **Namaste React** — NamasteDev.com *July 2024*

EDUCATION

Bachelor of Science — Computer Science *June 2018 – April 2021*
Dr. Babasaheb Ambedkar Marathwada University, Chh. Sambhajinagar | Percentage: 77.57%

KEY PROJECTS

ShopSphere — E-Commerce Frontend Application *(In Progress)* React · TypeScript · Redux Toolkit · Vite · Axios

- Independently developing a fully-typed e-commerce frontend application using **React** and **TypeScript**, with a focus on scalable, production-grade component architecture
- Built a responsive **product catalogue** and **product detail pages** with clean, reusable component structure and strict TypeScript typing across all layers.
- Implemented **search and filter functionality** for fast, intuitive product discovery.
- Managing global application state — cart items, product data, and active filters — using **Redux Toolkit** with a clean slice-based architecture.
- Integrated **Axios** for live API data fetching with structured handling of loading and error states.
- Configured **Vite** as the build tool for optimised development speed and production bundle performance.

JobScout — Real-Time Job Aggregator | React.js, TypeScript, Redux, Node.js, MongoDB

- Built a full-stack job aggregator application that scrapes real-time job listings across multiple job portals based on user-specified role and location, eliminating the need to search platforms individually.
- Implemented a **Python-based** web scraping engine using **BeautifulSoup** and the **Requests** library to programmatically access, parse, and extract structured job data from multiple external websites.
- Developed a **Node.js + Express.js** REST API backend to bridge the React Frontend with the Python Scraping service, handling request routing, data transformation, and response formatting.
- Built a responsive **React.js** frontend with an intuitive search interface, enabling users to input job title and location and view aggregated, real-time results in a clean, structured layout.
