## PROFESSIONAL SUMMARY

---

Results-driven **Frontend Engineer with 5 years of experience** building scalable, high-performance web applications and **internal developer platforms** using **React.js, TypeScript, and Node.js**. Experienced in developing custom **Spotify Backstage plugins** and owning end-to-end workflows, from API-driven dynamic UIs and reusable component architecture to backend integration, testing, and CI/CD automation. Proven track record of optimizing application performance, translating complex business requirements into intuitive interfaces, and delivering reliable, production-ready solutions in collaboration with cross-functional teams.

## PROFESSIONAL EXPERIENCE

---

**Frontend Developer** | **Tata Consultancy Services**

*August 2021 – Present*

Pune, Maharashtra

- Architected and delivered scalable, high-performance UIs for client-facing retail and internal enterprise applications using **React.js** and **TypeScript**, serving diverse user bases across multiple product lines.
- Designed and developed **custom Spotify Backstage plugins** from the ground up using **React, TypeScript, and Node.js**, contributing to an internal developer platform that enables streamlined self-service engineering workflows.
- Designed and implemented an **end-to-end template creation workflow**, including dynamic template discovery, backend API integration, template selection, and **schema-driven multi-step forms** that are automatically generated based on API responses.
- Built the complete **template provisioning and approval workflow**, enabling users to submit dynamically collected data through APIs to create new templates and initiate **administrator approval**, improving the efficiency and standardization of internal development processes.
- Engineered **reusable React components and UI patterns**, integrated RESTful APIs and Node.js middleware, and developed comprehensive **unit tests** for reusable components and critical UI functionality to improve reliability and reduce regressions.
- Established and maintained **CI/CD pipelines using GitHub Actions** and followed Git-based development practices to automate build, test, and deployment workflows, supporting consistent and reliable releases across environments.
- Optimized application performance through **lazy loading, code splitting, and memoization**, achieving up to **40% reduction in initial load time** and measurable improvements in Core Web Vitals, while collaborating with UI/UX designers and enterprise stakeholders to deliver scalable, production-ready solutions.
- Diagnosed and resolved **critical frontend production issues**, participated in code reviews, and mentored junior developers by establishing frontend coding standards and best practices, helping maintain code quality and reliable delivery across the team..

## TECHNICAL SKILLS

---

**Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3  
**Frameworks & Libraries:** React.js, Node.js, Redux, React Query, Tailwind CSS, Material UI, Bootstrap  
**Developer Platforms:** Spotify Backstage, Internal Developer Platforms (IDPs)  
**Testing:** Jest, React Testing Library, Unit Testing, Test-Driven Development (TDD)  
**Build, DevOps & Tools:** Git, GitHub, GitHub Actions, Docker, Webpack, Vite, npm, yarn  
**APIs & Integrations:** RESTful APIs, GraphQL  
**Engineering Practices:** Responsive Design, Web Accessibility (WCAG 2.1), Cross-Browser Compatibility, Performance Optimization, CI/CD

## CERTIFICATIONS

---

- **Frontend Developer (React)** — Hackerrank *September 2024*
- **Frontend Engineer** — Codecademy *July 2024*
- **Namaste React** — NamasteDev.com *July 2024*

## EDUCATION

---

**Bachelor of Science — Computer Science** *June 2018 – April 2021*  
Dr. Babasaheb Ambedkar Marathwada University, Chh. Sambhajinagar | Percentage: 77.57%

## KEY PROJECTS

---

**JobScout — Real-Time Job Aggregator** | React.js, TypeScript, Redux, Node.js, MongoDB

- Built a full-stack job aggregator application that scrapes real-time job listings across multiple job portals based on user-specified role and location, eliminating the need to search platforms individually.
- Implemented a **Python-based** web scraping engine using **BeautifulSoup** and the **Requests** library to programmatically access, parse, and extract structured job data from multiple external websites.
- Developed a **Node.js + Express.js** REST API backend to bridge the React Frontend with the Python Scraping service, handling request routing, data transformation, and response formatting.
- Built a responsive **React.js** frontend with an intuitive search interface, enabling users to input job title and location and view aggregated, real-time results in a clean, structured layout.
